Lorant Czarán, UN Office for Outer Space Affairs
Dean Djokic, Esri
Armen Grigoryan, UNDP
Annukka Lipponen, UNECE Water Secretariat
Irina Makarenko, Black Sea Commission
Larissa Owen, AGEDI

This CEU Summer University course aims at bridging the gap between environmental / public policy professionals and cutting-edge technologies and their practical applications by bringing ICT developers and experts (e.g. Esri and UNOOSA) into the classroom and arranging their direct communication with decision-making groups.

The primary focus of this course is ICT application in water management and water security. It will cover a number of technologies including remote sensing, geospatial technologies and decision-support systems, among others.

The Bridging ICTs and the Environment courses are being carried out as preparatory activities for the Eye on Earth Summit taking place in 2015 (<http://www.eoesummit.org>). Several initiatives developed under the auspices of the Summit will contribute to the course, including the Water Security and Disaster Management Special Initiatives, UNEP's Global Universities Partnership for Environment and Sustainability (<http://www.gupes.org>), and more.

For further information on the course, funding opportunities and application procedures, please visit http://summer.ceu.hu/bridging_making-2015 or email us at isepei.ceu@gmail.com.

The course is being run through the
ISEPEI Project at CEU.
